

THE 2014–15 INFLUENZA SEASON HAS ARRIVED

A routine annual influenza vaccination is recommended for all persons with sickle cell disease aged 6 months or older who do not have contraindications. \$ YDFFLQDWLRQ WR SUHYHQW LQÀXHQJD

is particularly important for persons who are at an LQFUHDVHG ULVN IRU VHYHUH FRPSOLFDWLRQV IURP LQÀX

Adults and children with sickle cell disease who have chronic lung (including asthma), heart (except isolated high blood pressure), kidney, and liver conditions, along with diabetes, strokes, or loss of spleen function should

was once again a huge success. With a goal to
FROOHFW XQLWV XQLWV ZHUH FROOHFWHG DIWHU
individuals registered for the drive.

Four donors gave what was equivalent to two
units using the ALYX procedure. **Each unit of
blood obtained was separated into red cells
and plasma, possibly touching the lives of
159 individuals.**
